

## 電子物理系學士班必修課程授課內容綱要

課程名稱	課程內容綱要
普通物理學 (I)	<ol style="list-style-type: none"> <li>1. 基礎數學</li> <li>2. 力學</li> <li>3. 轉動力學</li> <li>4. 相對論</li> <li>5. 波</li> <li>6. 流體力學</li> <li>7. 熱力統計學</li> </ol>
普通物理學 (II)	<ol style="list-style-type: none"> <li>1. 靜電學</li> <li>2. 電路學</li> <li>3. 磁學</li> <li>4. 電磁波</li> <li>5. 光學</li> <li>6. 近代物理</li> </ol>
電子學 (I)	<ol style="list-style-type: none"> <li>1. p-n 界面二極體元件及應用</li> <li>2. 雙極性電晶體元件及應用</li> <li>3. 場效電晶體元件及應用</li> </ol>
電路學	<ol style="list-style-type: none"> <li>1. 電阻性電路</li> <li>2. 電路額外分析技巧</li> <li>3. 一階電路</li> <li>4. 二階電路</li> <li>5. 交流穩態分析</li> <li>6. 拉氏轉換電路分析</li> <li>7. 傅立葉分析</li> </ol>
電磁學 (I)	<ol style="list-style-type: none"> <li>1. 向量分析</li> <li>2. 真空中的靜電學</li> <li>3. 真空中的靜磁學</li> </ol>
電磁學 (II)	<ol style="list-style-type: none"> <li>1. 電動力學</li> <li>2. 物質中的靜電學</li> <li>3. 物質中的靜磁學</li> </ol>
量子物理 (I)	<ol style="list-style-type: none"> <li>1. 光子論</li> <li>2. 物質波</li> <li>3. 原子結構</li> </ol>
量子物理 (II)	<ol style="list-style-type: none"> <li>1. 薛丁格理論</li> <li>2. 單電子原子</li> <li>3. 多電子原子</li> </ol>
光學 (I)	<ol style="list-style-type: none"> <li>1. 波動與電磁理論</li> <li>2. 光的傳遞與疊加</li> <li>3. 光的干涉</li> <li>4. 光的同調性</li> </ol>
理論力學 (I)	<ol style="list-style-type: none"> <li>1. 振盪</li> <li>2. 變分法計算的方法</li> <li>3. 哈密爾頓原理—拉格朗日及哈密爾頓動力學</li> </ol>
理論力學 (II)	<ol style="list-style-type: none"> <li>1. 中心力運動</li> </ol>

	<ol style="list-style-type: none"> <li>2. 耦合振盪</li> <li>3. 剛體動力學</li> </ol>
熱統計物理 (I)	<ol style="list-style-type: none"> <li>1. 熱能</li> <li>2. 第二定律</li> <li>3. 內含量與外延量</li> <li>4. 自由能與化學熱力學</li> <li>5. 古典統計</li> </ol>
應用數學 (I)	<ol style="list-style-type: none"> <li>1. 線性代數</li> <li>2. 向量分析</li> </ol>
應用數學 (II)	<ol style="list-style-type: none"> <li>1. 常微分方程式</li> <li>2. 傅立葉轉換</li> </ol>
應用數學 (III)	<ol style="list-style-type: none"> <li>1. 拉普拉斯變換</li> <li>2. 偏微分方程式</li> </ol>
專題研究 (I)	由系上各領域之教師自由定義。

## 電子物理系學士班選修課程授課內容綱要

課程名稱	課程內容綱要
熱統計物理 (II)	<ol style="list-style-type: none"> <li>1. 量子統計</li> <li>2. 半導體統計</li> <li>3. 有交互作用的系統</li> </ol>
電子學 (II)	<ol style="list-style-type: none"> <li>1. 頻率響應</li> <li>2. 差動放大器</li> <li>3. 運算放大器</li> <li>4. 振盪器與波型產生器</li> </ol>
固態電子學	<ol style="list-style-type: none"> <li>1. 晶體結構</li> <li>2. 量子力學導論</li> <li>3. 固態量子力學導論</li> <li>4. 平衡態的半導體</li> <li>5. 半導體能帶理論</li> <li>6. 半導體中電荷載子</li> <li>7. 載子的傳輸現象</li> <li>8. 非平衡態半導體的過量載子</li> </ol>
材料科學概論	<ol style="list-style-type: none"> <li>1. 晶體結構</li> <li>2. 晶體繞射與倒晶格</li> <li>3. 晶體鍵結</li> <li>4. 材料的熱學、機械及磁學性質</li> </ol>
固態物理導論	<ol style="list-style-type: none"> <li>1. 自由電子費米氣體</li> <li>2. 能帶結構</li> <li>3. 光學過程與電漿子、偏極子、極化子、及激子</li> <li>4. 材料的電學及光學性質</li> </ol>
量子力學導論	<ol style="list-style-type: none"> <li>1. 數學基礎</li> <li>2. 多電子波函數與算符</li> <li>3. 哈特里-福克近似法</li> </ol>
光學 (II)	<ol style="list-style-type: none"> <li>1. 光的偏振</li> <li>2. 晶體光學</li> <li>3. 光的繞射與折射</li> </ol>
光電半導體元件	<ol style="list-style-type: none"> <li>1. 光電半導體材料及元件物理</li> <li>2. 發光二極體</li> <li>3. 雷射二極體</li> <li>4. 光檢測器</li> <li>5. 太陽能電池</li> </ol>
光電科技導論	<ol style="list-style-type: none"> <li>1. 雷射原理</li> <li>2. 雷射光束傳播</li> <li>3. 雷射系統</li> <li>4. 光調製</li> <li>5. 雷射應用</li> <li>6. 光二極體、太陽能電池、光偵測器、液晶顯示器等</li> </ol>
近代光學	<ol style="list-style-type: none"> <li>1. 晶體光學</li> <li>2. 傅立葉光學</li> <li>3. 非線性光學</li> </ol>

光電量測與分析	<ol style="list-style-type: none"> <li>1. 光電儀器原理與測量</li> <li>2. 穿透及吸收光譜原理與測量</li> <li>3. 拉曼光譜光譜原理與測量</li> <li>4. 螢光光譜原理與測量</li> </ol>
半導體元件物理	<ol style="list-style-type: none"> <li>1. PN 界面</li> <li>2. PN 界面二極體的物理特性</li> <li>3. 金半界面與半導體異質界面</li> <li>4. 雙極性電晶體的物理特性</li> <li>5. 金氧半場效電晶體的物理特性</li> <li>6. 界面場效電晶體的物理特性</li> <li>7. 光電元件</li> </ol>
基本電學	<ol style="list-style-type: none"> <li>1. 電的基本概念</li> <li>2. 直流電路 (串聯電路、並聯電路)</li> <li>3. 直流迴路分析</li> <li>4. 電容</li> <li>5. 電容充放電</li> <li>6. 電感</li> <li>7. 電感充放電</li> <li>8. 交流電路基本概念</li> </ol>
數位邏輯	<ol style="list-style-type: none"> <li>1. 數字系統</li> <li>2. 基本邏輯運算與電路</li> <li>3. 布林代數</li> <li>4. 卡諾圖化簡</li> <li>5. 組合邏輯電路設計</li> <li>6. 正反器與序向電路設計</li> </ol>
計算機在物理之應用	<ol style="list-style-type: none"> <li>1. 基礎數值模擬 (利用自由軟體 Maxima 進行教學)</li> <li>2. 基礎儀控語言 (利用商用軟體 Labview©進行教學)</li> </ol>
專題研究 (II)(III)(IV)	由系上各領域之教師自由定義。

※綠色：半導體電子領域技術課程、藍色：光電科學領域技術課程、紫色：雙重領域技術課程。

## 電子物理系學士班實驗課程授課內容綱要

實驗課程名稱	實驗項目
普通物理學實驗 (I)	<ol style="list-style-type: none"> <li>1. 基本度量</li> <li>2. 單擺</li> <li>3. 牛頓第二運動定律</li> <li>4. 力學簡諧與阻尼振盪</li> <li>5. 機械能耗散</li> <li>6. 斜面運動</li> <li>7. 碰撞、</li> <li>8. 轉動慣量</li> <li>9. 浮力</li> <li>10. 自由落體</li> <li>11. 弦振盪及彈簧振盪</li> <li>12. 楊氏係數</li> <li>13. 固體比熱及液體比熱</li> </ol>
普通物理學實驗 (II)	<ol style="list-style-type: none"> <li>1. 示波器介紹與阻抗電路</li> <li>2. 光的反射折射與偏振</li> <li>3. 光的繞射與干涉</li> <li>4. 薄透鏡及透鏡組的焦距</li> <li>5. 三用電錶的介紹</li> <li>6. 大電容的充放電</li> <li>7. 柯西荷夫定律</li> <li>8. 交流阻抗</li> <li>9. 變壓器、電橋、等位線</li> </ol>
實驗物理 (I)	<ol style="list-style-type: none"> <li>1. RC 電路</li> <li>2. RL 電路</li> <li>3. RLC 電路</li> <li>4. 電學耦合</li> <li>5. 電磁感應</li> <li>6. 磁滯效應</li> </ol>
實驗物理 (II)	<ol style="list-style-type: none"> <li>1. 自動控制暨訊號量測實驗 (數位邏輯及電子學)</li> <li>2. 自動控制暨資料擷取實驗 (數位邏輯及電子學)</li> <li>3. 力學耦合震盪實驗 (力學)</li> <li>4. 陀螺儀實驗 (力學)</li> <li>5. 電流天平實驗 (電磁學)</li> <li>6. 布拉格晶格繞射暨微波實驗 (電磁波、光學、近物)</li> <li>7. 二維平面運動碰撞實驗 (力學統計)</li> <li>8. 密立根油滴電量實驗 (近物統計)</li> </ol>
實驗物理 (III)	<ol style="list-style-type: none"> <li>1. 黑體輻射 (近物)</li> <li>2. 邁克森干涉實驗 (光學)</li> <li>3. 法蘭克-赫茲實驗 (近物)</li> <li>4. 電子繞射 (近物)</li> <li>5. 絕熱氣體定律量測 (熱力學)</li> <li>6. 熱電效應 (熱力學)</li> <li>7. 熱機循環 (熱力學)</li> </ol>

	8. 臨界現象 (熱力學)
電子學實驗 (I)	<ol style="list-style-type: none"> <li>1. 基本儀器的使用</li> <li>2. 電阻(線性元件)與二極體(非線性元件)的特性曲線</li> <li>3. 二極體電路的工作點</li> <li>4. 整流電路</li> <li>5. 濾波電路</li> <li>6. 倍壓電路</li> <li>7. 截波電路</li> <li>8. 箝位電路</li> <li>9. 電晶體的基本認識</li> <li>10. 電晶體偏壓電路</li> <li>11. 共射極小信號放大器</li> <li>12. 共集極小信號放大器</li> <li>13. RC 耦合放大電路</li> <li>14. 直接耦合放大電路</li> </ol>
電子學實驗 (II) (選修)	<ol style="list-style-type: none"> <li>1. 運算放大器的簡介</li> <li>2. 反相與非反相放大器</li> <li>3. 加法器與減法器</li> <li>4. 微分器與積分器</li> <li>5. 比較器</li> <li>6. 正弦波產生電路</li> <li>7. 施密特觸發電路</li> <li>8. 無穩態多諧振盪器</li> <li>9. 雙穩態與單穩態多諧振盪器</li> </ol>
光電實驗 (選修)	<ol style="list-style-type: none"> <li>1. 光的繞射實驗</li> <li>2. 發光二極體光源特性的量測</li> <li>3. 光纖特性量測</li> <li>4. 高斯光束的測量</li> <li>5. 光的偏極實驗</li> <li>6. 壓電材料的形變測量</li> <li>7. 聲光調變實驗</li> <li>8. 光學像差實驗</li> </ol>

## Required Course Description for Undergraduate

Course Name	Course Description
General Physics (I)	<ol style="list-style-type: none"> <li>1. Foundation Mathematics</li> <li>2. Mechanics</li> <li>3. Rotation Mechanics</li> <li>4. Relativity</li> <li>5. Waves</li> <li>6. Hydromechanics</li> <li>7. Thermal Energy Statistics</li> </ol>
General Physics (II)	<ol style="list-style-type: none"> <li>1. Electrostatics</li> <li>2. Circuitry</li> <li>3. Magnetism</li> <li>4. Electromagnetic Waves</li> <li>5. Optics</li> <li>6. Modern Physics</li> </ol>
Electronics (I)	<ol style="list-style-type: none"> <li>1. Application of p-n Junction Diode</li> <li>2. Application of Bipolar Junction Transistor</li> <li>3. Application of Field-effect Transistor</li> </ol>
Electric circuits	<ol style="list-style-type: none"> <li>1. Analysis of Resistive Circuits</li> <li>2. Additional Techniques for Circuits</li> <li>3. Analysis of First Order Transient Circuits</li> <li>4. Analysis of Second Order Transient Circuits</li> <li>5. AC circuit analysis</li> <li>6. Circuit analysis Using the Laplace transform</li> <li>7. Circuit analysis Using the Fourier Techniques</li> </ol>
Electromagnetism (I)	<ol style="list-style-type: none"> <li>1. Vector Analysis</li> <li>2. Electrostatics in Vacuum</li> <li>3. Magnetostatics in Vacuum</li> </ol>
Electromagnetism (II)	<ol style="list-style-type: none"> <li>1. Electrodynamics</li> <li>2. Electrostatics in Matter</li> <li>3. Magnetostatics in Matter</li> </ol>
Quantum Physics (I)	<ol style="list-style-type: none"> <li>1. Photons</li> <li>2. Matter Waves</li> <li>3. Atomic Structures</li> </ol>
Quantum Physics (II)	<ol style="list-style-type: none"> <li>1. Schroedinger's Theory</li> <li>2. One-Electron Atoms</li> <li>3. Multi- Electron Atoms</li> </ol>
Optics (I)	<ol style="list-style-type: none"> <li>1. Wave Motion and Electromagnetic Theory</li> <li>2. The Propagation of Light and the Superposition of Waves</li> <li>3. Interference</li> <li>4. Basics of Coherence Theory</li> </ol>
Mechanics (I)	<ol style="list-style-type: none"> <li>1. Oscillations</li> <li>2. Some Methods in the Calculus of Variations</li> <li>3. Hamilton's Principle-Lagrangian and Hamiltonian Dynamics</li> </ol>
Mechanics (II)	<ol style="list-style-type: none"> <li>1. Central-Force Motion</li> <li>2. Coupled Oscillations</li> <li>3. Dynamics of Rigid Bodies</li> </ol>
Thermal and Statistical Physics (I)	<ol style="list-style-type: none"> <li>1. Energy in Thermal Physics</li> <li>2. The Second Law</li> <li>3. Interactions and Implications</li> </ol>

	<ol style="list-style-type: none"> <li>4. Free Energy and Chemical Thermodynamics</li> <li>5. Boltzmann Statistics</li> </ol>
Thermal and Statistical Physics (II)	<ol style="list-style-type: none"> <li>1. Quantum Statistics</li> <li>2. Statistics in Semiconductor</li> <li>3. Systems of Interacting Particles</li> </ol>
Applied Mathematics (I)	<ol style="list-style-type: none"> <li>1. Linear Algebra</li> <li>2. Vector Analysis</li> </ol>
Applied Mathematics (II)	<ol style="list-style-type: none"> <li>1. Ordinary Differential Equation</li> <li>2. Fourier Transform</li> </ol>
Applied Mathematics (III)	<ol style="list-style-type: none"> <li>1. Laplace Transform</li> <li>2. Partial Differential Equation</li> </ol>
Topical Research (I)	Be defined by the domain of teacher.

## Optional Course Description for Undergraduate

Course Name	Course Description
Thermal and Statistical Physics (II)	<ol style="list-style-type: none"> <li>1. Quantum Statistics</li> <li>2. Statistics in Semiconductor</li> <li>3. Systems of Interacting Particles</li> </ol>
Electronics (II)	<ol style="list-style-type: none"> <li>1. Frequency Responsivity</li> <li>2. Differential Amplifier</li> <li>3. Operational Amplifier</li> <li>4. Oscillator and Wave Generator</li> </ol>
Solid State Electronics	<ol style="list-style-type: none"> <li>1. The Crystal Structure of Solids</li> <li>2. Introduction to Quantum Mechanics</li> <li>3. Introduction to Quantum Theory of Solids</li> <li>4. The Semiconductor in Equilibrium</li> <li>5. Energy Band Theory in Semiconductors</li> <li>6. Charge Carriers in Semiconductors</li> <li>7. Carrier Transport Phenomena</li> <li>8. Nonequilibrium Excess Carriers in Semiconductors</li> </ol>
Introduction to Materials Science	<ol style="list-style-type: none"> <li>1. Crystal Structure</li> <li>2. Crystal diffraction and Reciprocal Lattice</li> <li>3. Crystal Binding</li> <li>4. Thermal, Mechanical, and Magnetic Characteristics of Materials</li> </ol>
Introduction to Solid State Physics	<ol style="list-style-type: none"> <li>1. Free Electron Fermi Gas</li> <li>2. Energy Band Structure</li> <li>3. Optical Processes and Plasmons, Polaritons, Polarons, and Excitons</li> <li>4. Electrical and Optical Characteristics of Materials</li> </ol>
Introduction to Quantum Mechanics	<ol style="list-style-type: none"> <li>1. Mathematical Review</li> <li>2. Many-Electron Wave Function and Operator</li> <li>3. The Hartree-Fock Approximation</li> </ol>
Optics (II)	<ol style="list-style-type: none"> <li>1. Polarization</li> <li>2. Crystal Optics</li> <li>3. Diffraction and Refraction</li> </ol>
Optoelectronic Semiconductor Device	<ol style="list-style-type: none"> <li>1. Optoelectronic semiconductor materials and device physics</li> <li>2. Light emitting diodes</li> <li>3. Laser diodes</li> <li>4. Photodetectors</li> <li>5. Solar cell</li> </ol>
Introduction to Optoelectronic Technology	<ol style="list-style-type: none"> <li>1. Laser Principles</li> <li>2. Laser Beam Propagation</li> <li>3. Laser System</li> <li>4. Optical Modulation</li> <li>5. Laser Application</li> <li>6. LED, solar cell, detectors, LCD display...</li> </ol>
Introduction to Modern Optics	<ol style="list-style-type: none"> <li>1. Crystal Optics</li> <li>2. Fourier Optics</li> <li>3. Nonlinear Optics</li> </ol>
Optoelectronic Measurement and Analysis	<ol style="list-style-type: none"> <li>1. The Theory and Measurement of Optoelectronic Instruments</li> <li>2. The Theory and Measurement Transmission and Absorption Spectrum</li> <li>3. The Theory and Measurement of Raman Spectrum</li> <li>4. The Theory and Measurement of Photoluminescence Spectrum</li> </ol>
Physics of Semiconductor Devices	<ol style="list-style-type: none"> <li>1. The PN Junction</li> <li>2. Physical Characteristics of PN Junction Diode</li> </ol>

	<ol style="list-style-type: none"> <li>3. Metal-Semiconductor and Semiconductor Heterojunctions</li> <li>4. Physical Characteristics of Bipolar Transistor</li> <li>5. Physical Characteristics of Metal-Oxide-Semiconductor</li> <li>6. Physical Characteristics of Field-Effect Transistor</li> <li>7. Optoelectric Devices</li> </ol>
Basic Electricity	<ol style="list-style-type: none"> <li>1. Foundation DC Concepts</li> <li>2. DC circuits</li> <li>3. Basic DC Analysis</li> <li>4. Capacitors</li> <li>5. Capacitor Charging and Discharging circuits</li> <li>6. Inductors</li> <li>7. Inductor Charging and Discharging circuits</li> <li>8. Foundation AC concepts</li> </ol>
Digital Logic	<ol style="list-style-type: none"> <li>1. Number System</li> <li>2. Basic Logic Operation and Circuit</li> <li>3. Boolean Algebra</li> <li>4. Reduction of Carnot Plot</li> <li>5. Design of Combinational Logic Circuit</li> <li>6. Flip-flop and Sequential Circuit Design</li> </ol>
Introduction to Computing in Physics	<ol style="list-style-type: none"> <li>1. Basic Numerical Analysis</li> <li>2. Instrument Control Language</li> </ol>
Topical Research (II)(III)(IV)	Be defined by the domain of teacher.

※Green: Semiconductor and Electronic Group, Blue: Optoelectronic Group

## Experimental Course Description for Undergraduate

Experimental Course Name	Experimental Item
General Physics Experiment (I)	<ol style="list-style-type: none"> <li>1. Basic Measurement</li> <li>2. Pendulums</li> <li>3. Newton's 2nd Law of Motion</li> <li>4. Simple Harmonic and Damped Oscillations</li> <li>5. Relaxation of Kinetic Energy</li> <li>6. Motion on Slopes</li> <li>7. Collisions</li> <li>8. Rotational inertia</li> <li>9. Buoyancy</li> <li>10. Free Fall</li> <li>11. Standing Waves on Strings and Springs</li> <li>12. Young's Modulus</li> <li>13. Specific Heats of Metals and Liquids</li> </ol>
General Physics Experiment (II)	<ol style="list-style-type: none"> <li>1. Oscilloscope and Impedance Circuits</li> <li>2. Reflection, Refraction and Polarization of Light</li> <li>3. Diffraction and Interference of Light</li> <li>4. The Focal Lengths of Lenses and Lens Systems</li> <li>5. Digital Multimeters</li> <li>6. Charge and Discharge of Electrical Capacities</li> <li>7. Kirchoff's Laws of Electrical Circuits</li> <li>8. Impedances in AC Circuits</li> <li>9. Transformers, Electric Bridges, Equipotential Lines</li> </ol>
Experimental Physics (I)	<ol style="list-style-type: none"> <li>1. RC Circuit</li> <li>2. RL Circuit</li> <li>3. RLC Circuit</li> <li>4. Electrical Coupling Experiment</li> <li>5. Electromagnetic Induction</li> <li>6. Magnetic Hysteresis Effect</li> </ol>
Experimental Physics (II)	<ol style="list-style-type: none"> <li>1. Measurement and Auto Control ( Logic and Electronics )</li> <li>2. Data Acquisition and Auto Control ( Logic and Electronics )</li> <li>3. Mechanical Coupling ( Mechanics )</li> <li>4. Gyroscope ( Mechanics )</li> <li>5. Current Balance ( Electromagnetism )</li> <li>6. Bragg Lattice Diffraction and Microwave ( EM wave, Optics, Modern Physics )</li> <li>7. Two-Dimensional Collisions ( Mechanical Statistics )</li> <li>8. Millikan Oil Drop Elementary Charge ( Modern Physics Statistics )</li> </ol>
Experimental Physics (III)	<ol style="list-style-type: none"> <li>1. Blackbody Radiation (Modern Physics)</li> <li>2. Michelson Interferometer (Optics)</li> <li>3. Franck-Hertz Experiment (Modern Physics)</li> <li>4. Electron Diffraction (Modern Physics)</li> <li>5. Adiabatic Gas Law (Thermodynamics)</li> <li>6. Thermo-Electric Effect (Thermodynamics)</li> <li>7. Heat Circulation (Thermodynamics)</li> <li>8. Critical Phenomenon (Thermodynamics)</li> </ol>

Electronics Experiment (I)	<ol style="list-style-type: none"> <li>1. Basic Instruments</li> <li>2. Characteristic Curves of Resistor (linear device) and Diode (non-linear device)</li> <li>3. Operation Point of Diode Circuit</li> <li>4. Rectifier Circuit</li> <li>5. Filter Circuit</li> <li>6. Multiply Voltage Circuit</li> <li>7. Clipper Circuit</li> <li>8. Clamp Circuit</li> <li>9. Basic Transistor</li> <li>10. Bias Circuit of Transistor</li> <li>11. Small Signal Amplifier of Common Emitter</li> <li>12. Small Signal Amplifier of Common Collector</li> <li>13. RC-couple Amplifying Circuit</li> <li>14. DC-couple Amplifying Circuit</li> </ol>
Electronics Experiment (II)	<ol style="list-style-type: none"> <li>1. Introduction to operational amplifier</li> <li>2. Inverting and non-inverting amplifier</li> <li>3. Adder and subtractor</li> <li>4. Differentiator and integrator</li> <li>5. Comparator</li> <li>6. Sinusoidal wave generator</li> <li>7. Schmedit trigger circuit</li> <li>8. Non-stable multivibrator</li> <li>9. Bistable and monostable multivibrator</li> </ol>
Optoelectronic Experiment	<ol style="list-style-type: none"> <li>1. Diffraction Experiment</li> <li>2. Light-Emitting Diodes Characteristics</li> <li>3. Fiber Characteristics</li> <li>4. Gaussian Beam Measurement</li> <li>5. Polarization Experimen</li> <li>6. Piezoelectric Crystal Deformation Measurement</li> <li>7. Acousto-Optics Experiment</li> <li>8. Optical Aberration Experiment</li> </ol>
